WILLEM KRUGER

Software Developer

PROFILE

I am an experienced software developer well-versed in various aspects of the Information Technology industry. My passion for technology, particularly programming, has been a driving force throughout my career. Although IT was not offered as a subject in high school, I devoted myself to self-study and pursued admission to a reputable university to further enhance my knowledge and skills in this field.

As I approached the end of my twelfth grade, I received an email from Belgium Campus, informing me of my eligibility to apply to their esteemed college, with the opportunity to commence my studies immediately following high school graduation.

Building computers

EDUCATION

Belgium Campus Itversity
2022 - 2024
The Bachelor's degree of IT focuses on information systems and provides foundational knowledge in software engineering and business intelligence. It covers a wide range of topics, including mobile and wireless networks, artificial intelligence, and intelligent systems. Emphasizing knowledge, execution, and professional skills, this degree prepares me for various opportunities like developing mobile and web-based apps and game development.

EXPERIENCE NOTE THIS IS ONLY THE MAIN COURSES

Web Development
During this course, we utilized several programming languages, namely HTML, CSS, JavaScript, and NodeJS to build dynamic and static websites. We also created servers for them to run on using MongoDB and Express.

Programming
With this course, we mainly used C# to write Windows applications that either stored data or took in user input, allowing them to update, delete, or insert the data.

Database Development
During this course, we used several different systems, namely Access, SQL Server, and Microsoft Management Studio. We learned all relevant database development techniques.
